UPCOMING PROJECT INFORMATION

SUM-Wooster Rd/State St (PID No. 108370)

The City of Barberton is proposing the reconstruction of concrete pavement at the Wooster Rd/State St intersection. The proposed project will extend from W Hiram St to the SR 619 Bridge along State St and from Ashland Ct to E Hiram St along Wooster Rd. In addition, the replacement of a 14" diameter waterline is proposed along Wooster Rd. To ensure that the decision-making process is comprehensive, input from local residents and businesses is needed.

The project consists of completely removing and replacing the limits of concrete pavement along State St and Wooster Rd near their intersection with each other. The reconstruction lengths are approximately 1,200 feet along State Street and 800 feet along Wooster Road. Most of the proposed improvements will be constructed within existing roadway right-of-way. However, temporary right(s)-of-way will be required for driveway replacement and areas of grading.

Detailed construction updates will be posted along the impacted routes and on the City of Barberton's webpage, www.cityofbarberton.com, prior to the start of construction. Access will be maintained to all adjacent properties for the duration of the project. The project is scheduled for construction starting in the spring of 2022 and the estimated cost of construction is approximately \$2,630,505 with the City of Barberton responsible for only 20% of that amount.

Any questions or comments concerning the project should be directed to Greg Tracy by January 10th, 2021.
